Summary

Passionate about building practical AI solutions and transforming ideas into real-world products. Currently pursuing BCA while actively learning and working in the fields of Data Science, Machine Learning, and AI automation. Recently achieved the Kaggle Notebooks Expert title through consistent project building and data-driven problem solving. I enjoy working with Python, Pandas, Machine Learning models, CRM systems, and intelligent automation workflows that create real business impact. Along with development, I'm deeply interested in the mathematics behind Data Science and Machine Learning, including statistics, probability, linear algebra, and model optimization. I believe strong mathematical understanding is what helps build better and more reliable AI systems. Focused on continuous learning, practical implementation, and building technology that solves meaningful problems. Tech Stack: Python | Pandas | Scikit-learn | Flask | SQL | C | C++ | Data Analysis | Machine Learning

Growthxity
Python Developer
November 2025 - Present (9 months)
India

At Growthxity, I work as a Python Developer focused on building practical, business-driven solutions that directly impact lead generation and customer management systems. My role revolves around creating scalable backend

systems, automating workflows, and integrating multiple platforms into a single, efficient ecosystem.

I actively contribute to the development of CRM-based solutions where data from various sources such as Meta Ads, Google platforms, and communication APIs are unified to streamline operations and improve lead handling efficiency. My work ensures that businesses can track, manage, and convert leads more effectively with minimal manual intervention.

On the technical side, I design and develop REST APIs, build automation pipelines, and optimize data processing workflows using Python. I also collaborate closely with marketing and frontend teams to ensure smooth data flow between systems and deliver real-time insights.

Additionally, I am involved in deploying and maintaining backend services, ensuring performance, reliability, and scalability. I continuously explore advanced concepts like machine learning-based lead scoring to enhance system intelligence and business outcomes.
